```java
/***********************************************************************
 *
 *      File:  JAWinitials.java
 *
 *      Description:  This code prints out my initials to the command prompt
 *                    using the first letter of my name
 *
 *      Author:  Joshua Wiley
 *
 *      Date:  2-7-15
 *
 *      Comments:  I had no trouble with this project.  I noticed some things
 *                 are very close to C++ so I was familiar with some of the
 *                 structure of Java.
 ***********************************************************************/
